

```
SELECT LOC.LOCNO,  
       LOC.LOCNAME  
FROM LOCATION AS LOC  
      INNER JOIN FACILITY AS FAC  
      ON LOC.FACNO = FAC.FACNO  
WHERE FAC.FACNAME = 'Basketball Arena';
```

The screenshot shows a database query editor window. The top toolbar includes icons for file operations, execution, and a 'Limit to 1000 rows' dropdown. The query editor displays the following SQL query:

```
1 SELECT LOC.LOCNO,  
2       LOC.LOCNAME  
3 FROM LOCATION AS LOC  
4 INNER JOIN FACILITY AS FAC  
5     ON LOC.FACNO = FAC.FACNO  
6 WHERE FAC.FACNAME = 'Basketball Arena';
```

Below the query editor is a 'Result Grid' section. It includes a 'Filter Rows' search bar and 'Export' and 'Wrap Cell Content' options. The results are displayed in a table with two columns: '#', 'LOCNO', and 'LOCNAME'.

#	LOCNO	LOCNAME
1	L103	Locker room
2	L105	Gate
